## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1, 3-5 and 7 are rejected under 35 U.S.C. 102(a) as being anticipated by Hayashi (2003/0141538). The reference to Hayashi shows a memory cell in FIG. 2, wherein a bit line (7) may be completely embedded in the silicon substrate. In addition, this bit line is formed in proximity to two adjacent surfaces of floating gate (3), which is separated from a control gate by a dielectric layer(4).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6, and 15-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hayashi in view of Wen (6,143,610) and Rodgers and Saitoh, of record. The reference to Wen adds to the basic teaching of Hayashi by showing that it is also known to form bit lines having a cross section wherein different portions are at right angles to each other. See, for example, bit line (22a) in FIG. 4A of Wen. One skilled in the art

would be motivated to incorporate such a wrap around configuration of Wen into the buried bit line configuration of Hayashi so as to achieve more efficient charge transfer.

Rodgers and Saitoh are cited as teaching the well known use of polysilicon electrodes, arsenic doping, and ONO dielectric layers in memory devices such as Hayashi.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
